Disclosure; 7pp; English.

Plasmid pAx799 contains a sequence derived from Xenopus laevis. The plasmid was screened from an E coli library using plasmid pXA457 to screen a larger library.

Although the gene product is similar to that of pXA457 at the N-terminus, it has an area of hydrophobic elements suggesting a membrane function. See also N93060.

Increasing protein prodn. from cultured animal cells - by adding a trichostatin to the medium, effective at low concn. and not injurious to host cells
Injurious to host cells
Disclosure; Page 10-15; 19pp; English.
3mu-1S cells (i.e. CHO cells expressing a peptidyl C-terminal alphamidase enzyme (AE)) were suspended in F-12 medium to which aliquots of trichostatin were added. Cells were cultured for 3 days at 37 deg and then assayed for AE. Without trichostatin, AE productivity was 708 U/ml. At 10, 50, 100 and 200 nM trichostatin, AE productivities were respectively 866, 1897, 1894 and 3359 U/ml.

They were identified using methods designed to Crearminal domain (CTD) function. SRB8 and SRB9 appear to repress Crearminal domain (CTD) function. SRB8 and SRB9 appear to repress CTD activity. Genomic clones (T59904-11) for the SRBs have been obtd. SRBs can be used to treat diseases resulting from alteration or SRBs can be used in in vitro transcription of DNA and to identify can also be used in in vitro transcription.

The DNA sequence (T34137) which encodes the biosynthetic enzymes of loosapentaenoic acid (EPA) can be used to transform Escherichia coli. The DNA sequence allows efficient microbial production of EPA, which is a raw material for drugs, agrochemicals, foods and animal feedstuffs. EPA is also useful for lipid balance correction and as an antihypertensive, antiinflammatory and anticancer agent. Sequence 2756 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Production of icosapentaenoic acid using transformed DNA coding for icosapentaenoic acid synthase derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             12-JAN-1996; J00030.

and/or connective tissue disease states.

pisclosure; p: English.

probes and Abs raised to the proteins can be used to determine probes and Abs raised to the proteins can be used to determine their levels useful in diagnosis of associated conective tissue their levels useful in diagnosis of sosteo/rheumatoid arthritis, diseases states such as osteoporosis, osteo/rheumatoid arthritis, paget's disease, artherosclerosis and periodontal disease.

Proteins may also be used to induce or block biological function. Sequence 368 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the feline infectious peritonitis 1 virus (FIPV-I) spike protein. The FIPV-I spike protein may be used in the production of a vaccine for the prevention and treatment of FIPV-I infection. The spike protein may be produced by transforming a host cell with the spike protein DNA and expressing the sequence such that the spike protein can be isolated. Sequence 1464 \mathrm{AA}_{i}

GENERAL INFORMATION:
APPLICANT: Young, Richard A.
APPLICANT: Koleske, Anthony J.
APPLICANT: Thompson, Craig M.
TITLE OF INVENTION: No. 5922585e1 Factors which modify Gene
TITLE OF INVENTION: Transcription and Methods of Use Thereof
NUMBER OF SEQUENCES: 35
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       107

probable membrane protein YMR216c - yeast (Saccharomyces cerevisiae)
N;Alternate names: hypothetical protein YM8261.10c
C;Species: Saccharomyces cerevisiae
C;Date: 08-Jul-1995 #sequence_revision 01-Sep-1995 #text_change 06-Feb-1998
C;Accession: S55098
C;Accession: S55098
C;Ribedman, K.; Brown, D.; Bowman, S.
                                                                                                 R; Dedman, K.; Brown, D.; Bowman, S.
submitted to the EMBL Data Library, June 1995
A; Reference number: $55089
A; Accession: $55098
A; Accession: $55098
A; Molecule type: DNA
A; Residues: 1-742 < CDED>

-I- FUNCTION: COMPONENT OF THE CUTICLES. IT FORMS A RIBBON APPROXIMATELY 2 MICRONS WIDE RUNNING ALONG THE LATERAL LINES UNDERNEATH THE ALAE. CONTRIBUTES TO THE FORMATION OF EXTRACELLULAR ENVELOPES PROTECTING THE ORGANISM FROM THE ENVIRONMENT.

-I- SUBCELLULAR LOCATION: SECRETED

-I- TISSUE SPECIFICITY: LOCALIZED IN A NARROW BAND NOT EXPOSED TO THE EXTERIOR, RUNNING UNDERNEATH THE ALAE.

-I- DEVELOPMENTAL STAGE: EXPRESSED DURING DAUER LARVA FORMATION.

-I- DOMAIN: THE SMALL REPEATS A-A-P-[AVI] ARE ALSO PRESENT IN MANY PROTEINS CONSTITUTING THE PROTECTIVE ENVELOPE OF OTHER SPECIES.
